Rector's Report
Academic Activities for 2015

Introduction

I hereby present to the Board of Governors the Rector's report of the University of Haifa's academic activity for 2015. Academic Faculty members of the University have been involved in research as well as teaching and advising students in advanced studies. This wide scope of activity reflects the University of Haifa's belief in academic excellence.

The Rector's report consists of seven sections, one for each of the seven faculties of the University. Each section begins with general information about the number of students in the faculty according to academic degrees. This is followed by information about each of the departments of that faculty. Each section includes a table detailing the regular staff members of the department for 2015 and the number of students according to academic degrees based on the following calculation: a first degree student in a dual-department track is counted as half a student; a first degree student in a single department track is counted as a full student; second and third degree students are also counted as full students. Thereafter there is information about the research students of each department for second and third degrees: this information includes the name of the academic advisor for the thesis/PhD dissertation, the name of the student, the topic of the research and the stage of the research. The final part of each faculty section includes a departmental report that summarizes the research activities for 2015 of the regular members of the academic staff of the department; research grant awards; publications (articles in journals, articles in scientific publications; encyclopedia entries; books and collections of scientific articles); as well as artistic works in the art department of the Faculty of Humanities.

I would like to mention that this report was prepared using software developed by the Unit for the Advancement of Computer-Mediated Instruction. I would like to thank the head of the unit, Mr. Shai Shpieler and the unit's engineer, Mr. Nadav Greenberg, for creating the software and for the intense work involved in its operation and maintenance.
